Rubrics for Sprint-2 Video and Activities			
Component	**Best Performance**	**Medium Performance**	**Average Performance**
1. Introduction	- Clear, engaging project introduction with team member roles. - Overview of Sprint 2 goals with enthusiasm and clarity.	- Basic project introduction and Sprint 2 goals, lacking detail or engagement.	- Unclear or incomplete introduction of project/team. - Objectives poorly summarized or missed.
2. Sprint Objectives	- Sprint objectives are clearly defined. - Comprehensive outline of Sprint 2 goals with confidence and clarity.	- Outline of goals provided but lacking some details or clarity.	- Goals poorly defined or missing key objectives.
3. Feature Implementation	- Each team member implemented at least one complete feature, well-explained with demos and relevance to objectives. - Shows feature testing, validation, and alignment with client needs. -For each feature clearly mention before and after sceario	- Basic feature implementation by most team members. - Explanation of features lacks depth in testing or validation.	- Minimal or unclear feature implementation. - Missing demos or testing details, with weak connection to objectives.
4. Figma Prototype & Client Feedback **(If this is not applicable in your project, clearly mention this, and why)**	- Clear Figma prototype designed for any new UI needed. - Adjustments made based on thorough client feedback with clear explanations. - Includes visuals of Figma prototypes and feedback response.	- Figma prototype created but adjustments lack detailed client input or explanations. - Some visuals included but not fully developed.	- Basic or incomplete Figma prototype lacking significant client feedback or explanation of changes. - Missing visuals of Figma prototypes.
5. Kanban Overview & Team Contributions	- Detailed Kanban board display with activities and individual team contributions clearly shown. - Enough issues created to reflect tasks, and each	- Kanban board shown but some tasks or contributions unclear. - Limited visibility of individual contributions.	- Kanban board poorly explained, with unclear or missing contributions.

Rubrics for Sprint-2 Video and Activities			
Component	**Best Performance**	**Medium Performance**	**Average Performance**
	member's contribution is visible.		
6. Website Development on Wix, WordPress, or Similar Platform **(For those working with these tools, it expected that most of static functionality must be completed by Sprint 2)**	- Major static functionalities of the website are completed, well-organized, and responsive. - Site structure and functionality reflect client requirements, with user-friendly navigation and design clarity.	- Basic static functionality implemented, but navigation or design lacks polish. - Limited responsiveness or partial alignment with client needs.	- Minimal or incomplete static functionality with poor organization or responsiveness. - Weak alignment with client requirements and objectives.
7. Documentation of System Architecture, Database, User Interface, and Testing Plan Documentation **(If some component is not applicable for your project, clearly mention, why)**	- Clear, comprehensive documentation covering system architecture, database design, UI layout, and testing plan. - System architecture thoroughly explained, including components, interactions, and data flow. - Database schema includes detailed ER diagrams, relationships, and indexing/normalization strategies for performance. - User interface design is supported by wireframes or prototypes, showing layout, navigation, and client feedback adjustments. - Complete testing plan includes unit, integration, and system test cases with explanations of tools, methods, and any issues addressed.	- Basic documentation provided for each component, but some areas lack depth or clarity. - System architecture outlined with minor details missing in interactions or data flow. - Database design includes tables and relationships but lacks depth in optimization strategies. - User interface designed with some feedback adjustments, but lacks depth in usability. - Testing plan provided but lacks detail in test cases.	- Minimal or unclear documentation across components. - System architecture missing key details on components or data flow. - Basic or incomplete database schema with limited detail on relationships and optimizations. - UI design is incomplete or lacks client feedback adjustments. - Testing plan is vague or missing important test cases and explanations of methods or issues.

Rubrics for Sprint-2 Video and Activities			
Component	**Best Performance**	**Medium Performance**	**Average Performance**
8. Sprint Achievements and Challenges	- Comprehensive summary of achievements with specific explanations of challenges and solutions. **- Clear demonstration of progress from Sprint 1 to Sprint 2.**	- Achievements and challenges mentioned but lacking depth in explanation. - Limited demonstration of progress.	- Basic or unclear summary of achievements and challenges, missing solutions or poorly explained.
9. Next Steps and Sprint Retrospective	- Detailed plan for next steps with insightful retrospective on successes and areas to improve. - Specific actions outlined based on client feedback and Sprint 2 experience.	- Next steps and retrospective presented but lacks depth in reflection. - General improvement suggestions without specifics.	- Poorly explained next steps or missing retrospective with weak insights for improvement.
9. Responsible Use of Generative AI (if applicable)	- Clear explanation of *whether and how* GenAI tools (e.g., ChatGPT, GitHub Copilot, AutoGen, etc.) were used. - Usage is responsible, transparent, and well-documented (e.g., in MoMs, reports, or commit messages). - Demonstrates meaningful improvements such as faster documentation, code quality enhancement, testing support, or design ideation. - Includes critical reflection on GenAI's limitations (bias, accuracy, ethics) and shows that final accountability for the work rests with the team.	- GenAI usage is mentioned with some examples, but documentation or reflection on impact/limitations is limited. - Improvements are described, but without clear evidence of integration into the project workflow.	- Minimal or vague mention of GenAI tools. - No clear evidence of improvements, or use is undocumented. - No reflection on responsible use or limitations.
10. Conclusion	- Clear, professional conclusion, thanking stakeholders and leaving a positive impression. - Engages the audience with a sense of completion and forward momentum.	- Basic conclusion with thanks, but lacking in professionalism or clarity.	- Weak or unclear conclusion, missing thanks or failing to wrap up presentation effectively.
